

# BKF

## Smoke extract duct fan

### Features:

- 400°C/120 min (F400)
- Continuous operation up to 120°C media
- Casing made of zinc-magnesium coated steel (ZM)
- Backward curved impeller made from pre-galvanised steel (size 355, 450) respectively from steel and galvanised
- Motor outside the air stream
- Single speed IE2 motors resp. two speed motors
- PTC serial built-in motor
- Certified according EN 12101-3 by BSI, UK
- Dual purpose (normal ventilation plus smoke and heat extract)
- ErP compliance 2018
- Installation possible in all positions, flange connection 30 mm
- Installation outside building or inside building, outside fire zone in well ventilated rooms
- Applications: malls, garages, warehouses, kitchen exhaust

BKF smoke and heat extract fans are used in case of fire to extract smoke gases and also during normal working conditions for standard ventilation.

Smoke free escape routes assist egress and provide clear access points for fire departments. Extracting poisonous and hot gases also make fire extinguishing easier and reduce the damage on the building.

About installation possibilities, especially inside building please see instructions.

For speed control of single speed motors use combination of frequency converter and appropriate filter to motor side (sine or du/dt), respectively observe instructions. Tested to 400°C/2h together with frequency converter. However, we recommend bridging of frequency converter in

case of fire to eliminate possible risk of malfunction of frequency converter. In case of fire all motor protective devices and thermal protections must be bridged or disabled to guarantee functional capability. When choosing AES control accessory please observe serial connecting capability of the motor (instructions).

### Accessories

**PG-BKF**  
Protective grid

**WPR BKF**  
Weather protection

**FLC BKF**  
Flexible connection

**Drain nipple BKF**

\* Accessories details available on page 7.

## Performance

Static pressure [Pa]

## Wiring diagram

Connection in the motor terminal box.

## Installation examples

Horizontal motor shaft, with outlet protective grid PG BKF and flexible connection FLC BKF.

Vertical motor shaft, with outlet protective grid PG BKF, flexible connection FLC BKF and weather protection WPR BKF.

Vertical motor shaft, with flexible connections FLC BKF.

Vertical motor shaft, with duct or flexible connection on the height H2/H3 (see dimensions). Non-standard dimensions of flexible connections are available on request.

### Protective grid PG-BKF

Protective grid is used, if the fan is installed at the end of duct. It prevents risk of contact with impeller. Bird protection. Made of zinc-magnesium coated steel (ZM).

### Drain nipple BKF

Used when cleaning accumulated waste liquid and sludge from the casing (heavy kitchen use). On the fan's casing a hole needs to be drilled (with a pyramid drill). Observe slope to drain. Not to be used with motor pointing downwards. The nipple is made of stainless steel. To be fastened with self-drilling screws onto the casing. Sealing tape/silicone sealant and fastening material is not provided.

### Weather protection WPR BKF

Weather protection is used to prevent direct rain/snow impact on the motor, when the fan is installed outdoor, with vertical motor axis on the upper side. Made from seawater resistant aluminium.

### Flexible connection FLC BKF

It prevents transmission of vibrations to the duct system. The flanges are made of pre-galvanized steel. A high temperature resistant glass tissue with silicon is used for the flexible part. Sealing tape and fastening material is not provided. Tested to 400°C, 120 min, together with the fans.
